

Smartphone & Tablet Apps for Low Vision Patients

Magnifier Apps

Designed to replace the handheld magnifier. These apps utilize the built-in camera to zoom in on text and sometimes also use the camera flash LED to add light.

Navigation; Phone Management Help

The patient just indicates their home and work locations, which are tracked by cell tower usage, and then they can set their phone to do things like automatically turn on the wifi when at home, turn off the ringer at work and turn on the GPS when leaving home.
